## New DVRs Added to Pelco DX4000 Series

Delivering the right features at the right price, Pelco is excited to introduce the new Pelco DX4500 and DX4600 Digital Video Recorders. These two new systems round out the choices now available within the DX4000 family, offering a comprehensive line of value-based, entry-level DVRs, spanning four to 16 channels, and giving users greater flexibility to find the perfect system for their application.

### Maximize Your Investment

Ready-to-record right out of the box and exceptionally simple to operate, these units come with a wireless remote control that greatly minimizes employee-training time. These systems can be operated from the front panel, via remote control, or with an optical mouse.

By using the remote client, users can keep watch over multiple locations at once, even from the comfort of their home. And with the ability to trigger recording and alarms on motion or external contacts, the DX4500 and DX4600 series are an automated monitoring system perfect for unattended applications.

Because every DX4000 series DVR is designed to work with today's broadband networks by utilizing MPEG-4 compression technology, users can leverage existing network infrastructure. MPEG-4 ensures high-quality images with smaller file sizes, resulting in longer storage times and providing efficient transmission over Ethernet.

With powerful search features and HDD Storage Manager, DX4500 and DX4600 systems are a worry-free digital recording solution. From slips and falls, to loss prevention, to vandalism – with DX4500 and DX4600 DVRs, the video you need is always at your fingertips.

### X6 Operations

Pelco believes multitasking is a good thing. That's why DX4500 and DX4600 systems have the power to simultaneously view live video while recording and playing back recorded video. Additionally, users can also control PTZ camera systems, export video, and access the system remotely or through the network – all at the same time.

### Search Features

Both DX4500 and DX4600 DVRs feature fast, powerful search capabilities, including time/date search, event search and bookmark search. DX4600 systems also feature pixel-based search capabilities. This allows users to highlight a finely detailed area of the image, and then search through the recorded video for motion that

occurred within that area. Users are able to search faster and more accurately with this impressive feature.

### User-Defined Storage Manager

DX4500 and DX4600 systems deliver efficient hard drive storage. With the user-defined Storage Manager you can specify how much hard drive space to allocate to alarm recording. The remaining hard drive space is then used for continuous recording. This powerful feature allows users to allocate their hard drive for the type of recording that is important to them.

### Picture-on-Picture

With the powerful Picture-on-Picture capability, DX4500 and DX4600 users can overlay live video onto recorded video. Because both signals are processed simultaneously, users can create the ideal display for their needs.

Packed with features, easy-to-use and affordably priced, the new Pelco DX4500 and DX4600 Digital Video Recorders are the evolution of value and functionality.

## DX4000 Series of Digital Video Recorders Models and Features

FEATURE	DX4004	DX4500	DX4600
Channels	4	8 or 16	8 or 16
